

Talent Tracker

Version Information

Item	Details
Project Name	Talent Tracker
Project Type	Academic Team Project
Team Size	3 Members
Prepared By	Ayushi Agarwal
Document Version	1.0

1. Project Overview

Talent Tracker is an AI-powered career development platform designed to assist students and job seekers in creating professional resumes, generating personalized cover letters, and exploring industry insights through a single web application.

The project was developed as a final-year academic project by a team of three members. This project charter has been prepared after project completion as a learning exercise to demonstrate project management practices and documentation.

2. Business Problem

Students often use multiple websites and tools for resume creation, cover letter writing, and career guidance. This process can be time-consuming and inconsistent.

Talent Tracker addresses this challenge by bringing these services together in one platform with AI-assisted features.

3. Project Objectives

- Develop a centralized career assistance platform.
- Simplify resume creation.
- Generate AI-powered cover letters.
- Provide industry insights for users.
- Deliver a responsive and user-friendly application.
- Deploy the application for online access.

4. Project Scope

In Scope

- User authentication
- Resume Builder
- AI Cover Letter Generator

- Industry Insights
- User Dashboard
- Deployment using Vercel

Out of Scope

- Mobile application
- Job application portal integration
- Payment gateway
- Video interview module

5. Success Criteria

The project is considered successful if:

- Users can securely log in.
- Resume generation functions correctly.
- AI-generated cover letters are produced successfully.
- The application is accessible through deployment.
- Core features operate without major issues.

6. Stakeholders

Stakeholder	Responsibility
Development Team	Design and development
End Users	Platform usage and feedback
Academic Guide	Project evaluation
AI Service Provider	AI content generation
Hosting Platform (Vercel)	Application deployment

7. My Contribution

As a team member, my primary responsibilities included:

- Integrating AI functionality into the application.
- Managing the GitHub repository and version control.
- Preparing project documentation.
- Deploying the application using Vercel.
- Supporting testing and issue resolution during project completion.

8. Key Deliverables

- AI-powered career platform
- Resume Builder
- AI Cover Letter Generator
- Industry Insights module

- GitHub repository
- Deployment on Vercel
- Project documentation

9. Constraints

- Academic project timeline
- Limited development resources
- Dependency on external AI services
- Free-tier hosting and database services

10. Risks

Risk	Mitigation
AI API unavailable	Implement error handling and retries
Deployment issues	Test deployment before submission
Git merge conflicts	Use proper branching and reviews
Timeline delays	Prioritize core features first

11. Lessons Learned

This project strengthened my understanding of collaborative software development and introduced me to AI integration, version control, deployment practices, and technical documentation. Preparing this project charter after completion also helped me understand how structured planning and project management practices can improve software delivery.
